

As an Administrator of a hospital here in Texas, it seems I am faced with the constant headache of new compliance regulations and “requirements”. Having heard of the term “Red Flags” but not being aware of how to fully address the issue, we turned to the TORCH and Texas Hospital Association partner, ID Theft Solutions of America.

We were able to become pro active in the fight against Identity Thieves and these new rules with their unique NO COST programs. Their comprehensive services offered a solution that was very organized and simple to implement. As part of their program, they provided our facility:

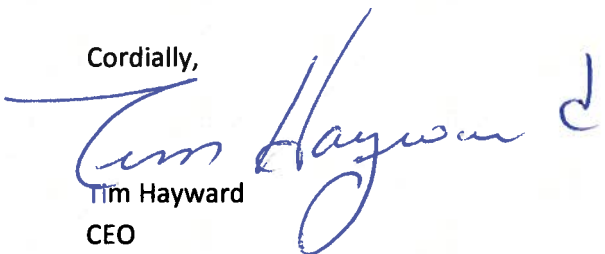

- On site Risk assessments
- Implemented and developed an identity theft “Red Flag” policy
- Trained all employees about these policies and documented personnel files
- Notified our vendors
- Provided identity theft and legal benefits as a “voluntary” payroll deduction for our employees

Having had every employee attend training, we now can move forward with confidence and focus again in offering the best care possible to every member of our community. By making the ID theft and Legal services available to our employees and their families, we have strengthened the foundation of our facility and received great feedback from the staff.

I am aware that a data breach is unpreventable; however I can now say confidently that we have taken every reasonable step to be proactive in securing our patients, employees, and vendor’s data.

I would recommend anyone looking to enhance their current compliance programs or employee benefits to work with ID Theft Solutions of America.

Cordially,

Tim Hayward
CEO
